## ABSTRACT

A very short paper with just a few citations, designed to illustrate LaTeX's handling of a bibliography.

### 1. Introduction

I wrote a paper a long time ago (Richmond & Knapp 1986). Actually, my advisor, Gillian Knapp, wrote most of it; she was kind enough to permit me to put my name first.

Years later, as part of my graduate work, I helped to automate a telescope. Richmond et al. (1993) describes that project.
