

# A General Overview of Coursework for Intro to Special Relativity

Learning styles vary, so what worked for me may not  
work for everyone

# Homework Sets

- Work on it throughout the week
  - Don't leave it all until right before it's due (I know this will be ignored, but I can only hope)
- Write out the work for problems
  - Useful for future reference
- Ask for help when you need it
  - This part of Dr. Richmond's job description
  - Also applies to mental and physical health

# Tests/Exams (/whatever you feel like calling them)

- Figure out how you best understand the information in the course:
  - Try to connect everything so it's coherent framework
- Identify approaches for different problem types
  - Worst case scenario, this means you can at least write out your thought process
- Write the formula sheet for you

*Just don't worry about them right now.*
